EnergyEdge Document #: 120111

***EnergyEdge* Qualifies under Federal Acquisition Regulations**

EnergyEdge Qualifies as Unique Product

The U.S. Patented **EnergyEdge** concrete edge product provides “unique capabilities” by combining forming, insulating and protective functions into one assembly that is installed in one installation procedure. It meets current building & energy codes.

EnergyEdge and other “OR EQUAL” Alternatives

EnergyEdge can be specified on any Federally Funded, Government or Defense Sector project as a solution to slab and foundation edge insulation. Contractors or manufacturers are not prohibited from submitting alternate equal solutions that provide like functions including:

1. R-10 insulation, approved for below grade application and containing insect resistive performance; and
2. A durable protective shell or finish fastened and sealed at the top edge of the concrete and protecting the exposed top edge and face of the insulation (nominal 8”) from damage between the top of slab and finished grade both during and after the construction process.

Federal Acquisition Regulations

Federal Acquisition Regulations (FAR) qualify products, like **EnergyEdge**, under **Subpart 6.3 – “Other Than Full and Open Competition”** allowing their inclusion in project specifications and building detailing because they are developed to provide “**unique supply(s) or service(s) available from only one source or only one supplier with unique capabilities.**” Omission of **EnergyEdge** from projects because of its unique capabilities is contrary to the intent of this section of the FAR regulations.

EnergyEdge and Federal Specifications

Performance requirements for **EnergyEdge** have been incorporated into the **Uniform Federal Guide Specifications (UFGS)**. These requirements can be found in Section 03 30 00, Cast-in-Place Concrete, available for download on our website at www.EnergyEdgeForm.com. This document is currently under review by CCR Management, the governing agency for the UFGS. Contact **EnergyEdge** for status updates.
